

# The NASA LCLUC Update to SCERIN

GARIK GUTMAN,  
LAND-COVER/LAND-USE CHANGE PROGRAM MANAGER,  
NASA HEADQUARTERS  
WASHINGTON, DC

# South/Central Eastern Europe Regional Information Network (SCERIN)

Petya Campbell (NASA)

Jana  
Albrechtova  
(Charles  
U.)

Lucie  
Kupkova  
(Charles  
U.)

## Motivation

- Joint proposal writing
- Data product validation
- Joint papers
- Continuous interactions
- Regular annual workshops
- Updating inventory
  - publications
  - projects
  - funding
- Educational component
  - Trans-Atlantic Training adjacent to SCERIN workshops
- **Develop a roadmap: timeline/ milestones**
- **Plan for two years at least**

# SCERIN: March Over the Old Empire

# NASA Operating Missions

Over 50 Years in Space!

National Aeronautics and Space Administration

## EARTH FLEET

# NASA Land Surface-Relevant Missions

Systematic Missions - Observation of Key Earth System Interactions

Exploratory Missions -

Exploration of Specific Earth System Processes and Demonstration of Technologies

**ShuttleRadar Topography Mission SRTM**  
2/11/02-2/22/02  
Space Shuttle Endeavour

**Earth Observing EO-1**  
ALI (predecessor of Landsat-8)  
**Hyperion - first hyperspectral in space**  
11/21/00-3/30/2017

International Space Station (ISS)

**ECOSTRESS** (thermal IR)  
**GEDI** (Lidar)  
**DESIS** (Hyperspectral)  
Deployed in 2018

**EMIT** (Hyperspectral)  
Deployed in 2022

# Landsat Next

- ▶ Constellation of 3 small satellites
- ▶ 26 wavelengths bands
- ▶ More frequent and finer resolution
- ▶ Launch: **late 2030**

Landsat Next constellation of **three spacecraft** will provide finer spatial resolution (10-20m) and expanded spectral (26 band) imaging capabilities **every six days** (at the equator)

# Global Night Lights: DMSP/OLS → VIIRS/S-NPP

From OLS (5km<sup>2</sup>/ 6 bits) to VIIRS( 742 m<sup>2</sup> /14 bit)

The Night Lights composite assembled from data acquired by the Suomi National Polar-orbiting Partnership (Suomi NPP) satellite over nine days in April 2012 and thirteen days in October 2012.

# DMSP/OLS Night Lights Over Europe: 1992-2009

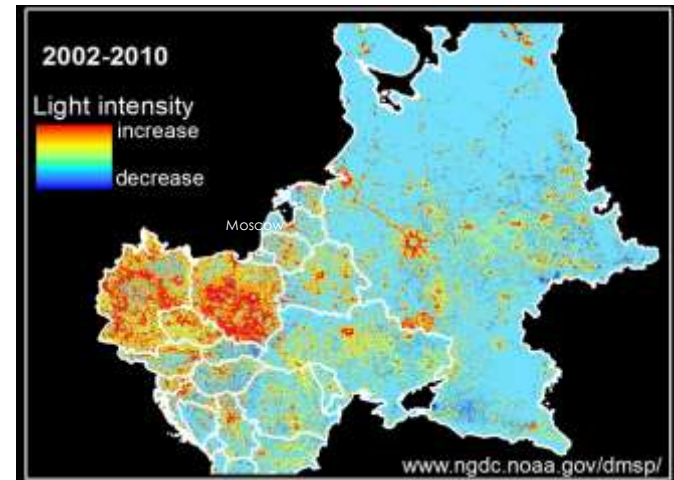

# DMSP Night Lights Reflecting Changes in Economy

## The Decade of Collapse

## The Decade of Recovery

Deep Blue: Depressed Economies  
(e.g. Ukraine & Moldova)  
Red: Positive Economy Development

Light Blue: neutral (not much change)

Red: Economy and urban expansion (e.g. Moscow)

Courtesy: Chris Elvidge (formerly at NOAA)  
Volker Radeloff (U. Wisconsin)

# 2021 Pre-war Condition: Ukraine

The image shows three months of 2021 VIIRS nighttime lights as red, green, and blue. September 2021 = red. October 2021 = green. November 2021 = blue. The white tones indicate the brightness of lighting is near equal in all three months.

Courtesy: Chris Elvidge (School of Mining)

# 2022 War Impacted Condition

The image shows VIIRS nighttime lights as red, green, and blue. September 2022 = red. October 2022 = green. November 2022 = blue. The white tones indicate the brightness of lighting is near equal in all three months. Most of the 2021 lighting features have been lost in the Ukraine in 2022. Note that lighting is still present in the center of Kyiv and Lviv. Lights are on in portions of Russian controlled Donbas and Crimea.

# 2022 War Impacted Condition

The image shows VIIRS nighttime lights from three Octobers as red, green, and blue. October 2020 = red. October 2021 = green. October 2022 = blue. The white tones indicate the brightness of lighting is near equal in all three months. Most of the lighting features in Ukraine are a golden-yellow, indicating that lighting was not detected in 2022. Note that lighting is still present in the center of Kyiv and Lviv. Lights are on in portions of Russian controlled Donbas and Crimea.

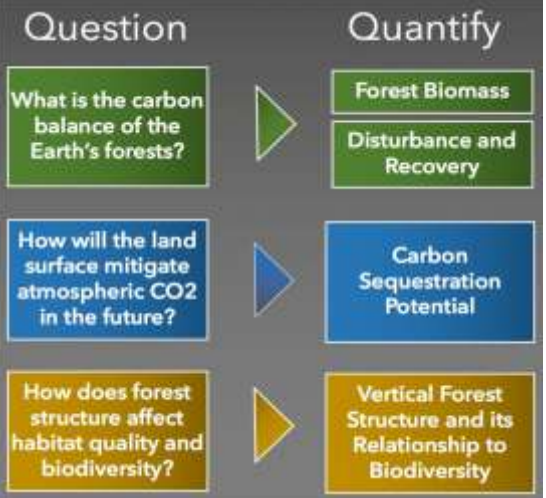

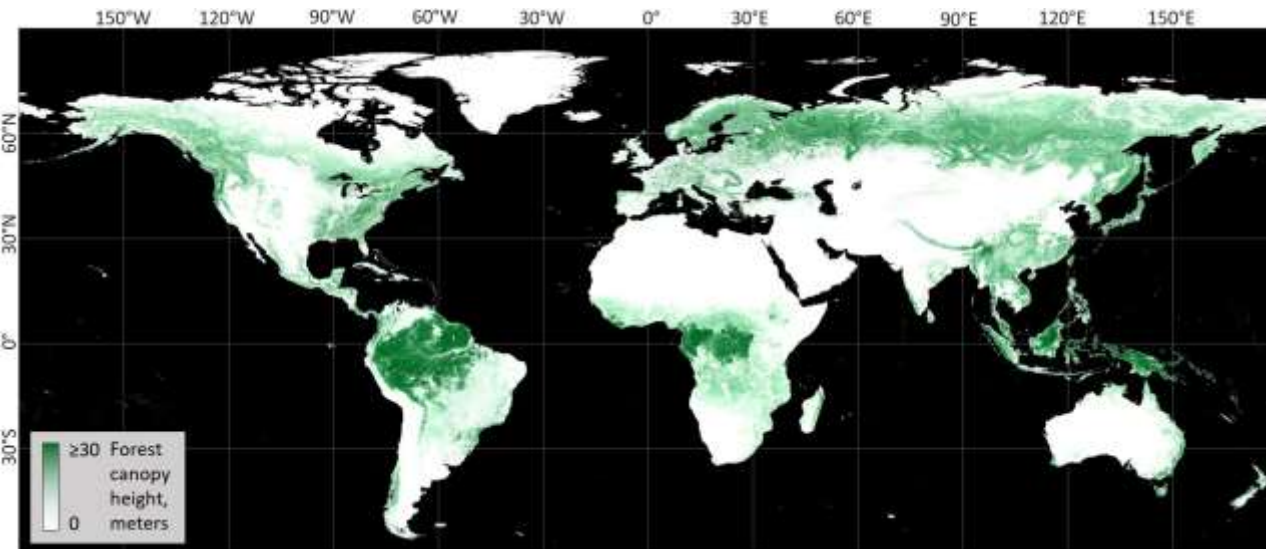

# Global Ecosystem Dynamics Investigation NASA GEDI instrument on ISS

- High resolution laser ranging observations
  - Launched June 29, 2018
  - three lasers produce eight parallel tracks of observations
  - each laser fires 242 times per second and illuminates a 25 m spot (a footprint) on the surface

Global Land  
Analysis & Discovery

Global Forest Canopy Height: 2019

Integration of the GEDI lidar forest structure measurements and Landsat analysis-ready data time-series

# ECOSTRESS: NASA Instrument on ISS

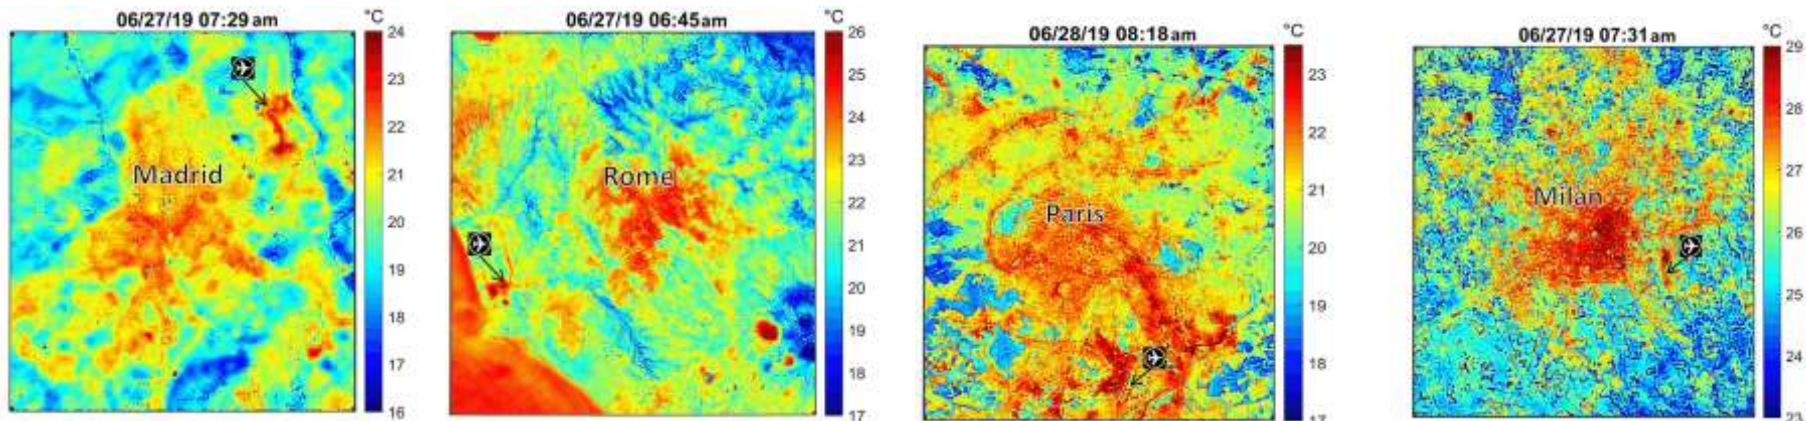

## ECOsystem Spaceborne Thermal Radiometer Experiment on the International Space Station (ISS)

### ▶ Prototype HypIRI Thermal Infrared Radiometer

- ▶ Launched June 29, 2018
- ▶ 5 spectral bands in the 8-12.5  $\mu\text{m}$  range +1.6  $\mu\text{m}$
- ▶ Spatial resolution ~70 m
- ▶ **Advantage** over ASTER (on TERRA) – more frequent revisit

### ▶ Science objectives

- ▶ Identify critical thresholds of water use and water stress in key biomes (e.g., tropical/dry transition forests, boreal forests)
- ▶ Detect the timing, location, and predictive factors leading to plant water uptake decline and cessation over the diurnal cycle
- ▶ Measure agricultural water consumptive use over CONUS at spatiotemporal scales applicable to improving drought estimation accuracy

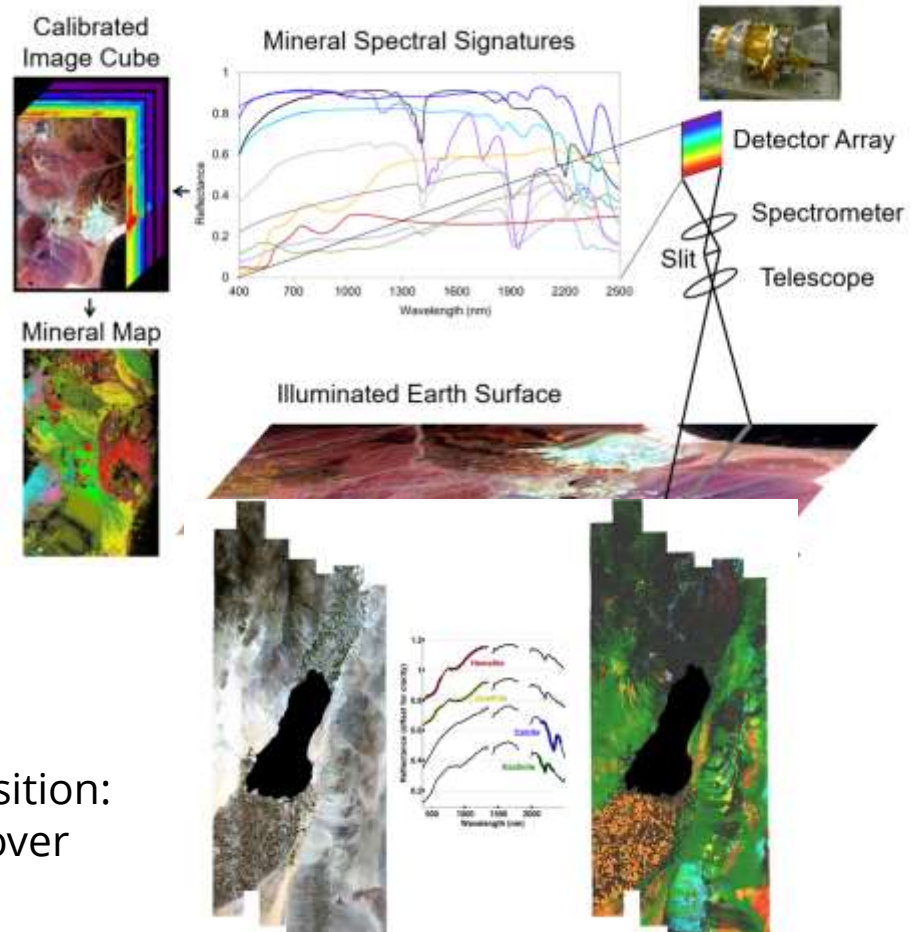

# EMIT on ISS

## Earth Surface Mineral Dust Source Investigation

- ▶ Advanced imaging spectrometer with spectra range: 380-2500 nm
- ▶ Launched July 14, 2022
- ▶ **Primary applications: mineral dust, its heating and cooling effects in the atmosphere**
- ▶ **Potential applications: natural hazards** ( flood extent, ecosystem impacts, and surface water sediment load); **environmental pollution** (oil spills, ocean plastics, acid mine drainage, etc.); **coastal waters and harmful algal blooms** (ocean phytoplankton, harmful algal bloom biomass and composition, coral presence and bleaching events, and the health of coastal ecosystems)

EMIT Imaging Spectrometer Instrument Approach

Airborne AVIRIS mapping mineral composition: hematite, goethite, calcite, and kaolinite over the Salton Sea region of California

# Using Very High-Resolution Observations

Commercial satellites offer images at fine spatial scale and high temporal resolution

- ▶ The first NASA Data Buy 2003 – **Ikonos**
- ▶ **Planet Labs** constellation (>200 sats) acquire daily images of the Earth with 3-m resolution
- ▶ **Maxar** (Digital Globe, WorldView) with 1m resolution
- ▶ NASA Commercial Smallsat Data Acquisition (**CSDA**)
- ▶ Limited Planet datasets are available for **free** at Universities
- ▶ Wall-to-wall VHR data **over tropics** purchased by the government of Norway (to tackle tropical deforestation)
- ▶ Special Issue in Remote Sensing (2020) on applications of VHR data in **LCLUC studies**

# Damage to Ukraine's Nova Khakovka dam

1 June 2023

2 June 2023

6 June 2023

Source: Planet Lab

# Flooded streets in Kherson

After

# South Kherson severely affected by flooding

# Kherson district, Ukraine: Flood, June 2023

Source: Maxar

# Passive and Active remote sensing

**Passive:** Microwave radiometer records the natural microwave emission from the Earth  
the spatial resolution of passive microwave observations is generally low (SMOS 35-50km)

# NASA-CNES Surface Water and Ocean Topography (SWOT)

- ▶ SWOT's 120-km-wide swath with overlaps over most of the globe with an average revisit time of 11 days
- ▶ Launched Dec 16, 2022
- ▶ On land, it will collect data on lakes and reservoirs larger than 62,500 m<sup>2</sup> and rivers wider 100 m with 50-m spatial and 10-cm height resolutions
- ▶ All weather - penetrate cloud cover and the dark of night

SWOT will survey nearly all water on Earth's surface for the first time with **Ka-band Radar Interferometer** (KaRIn, frequency between 26.5 and 40 GHz)

# NASA-ISRO SAR (NISAR)

- ▶ Will observe Earth's land and ice-covered surfaces globally with 12-day repeat cycle
- ▶ Swath of 242 km
- ▶ Resolution 3–48 m for L-band
- ▶ Resolution of 3-24 m for S-band
- ▶ Planned Launch Date: 2024
- ▶ Will observe the distribution of vegetation and biomass to better understand ecosystems' responses to disturbance and recovery
- ▶ Will map above-ground woody biomass density for estimating carbon emissions from land-use change with much more accuracy

L-band (24 cm) and S-band (12 cm) polarimetric SAR

# ESA SAR P-band BIOMASS Mission

**biomass**

- ▶ BIOMASS satellite is part of ESA's Living Planet Programme
- ▶ Will provide global maps of the amount of carbon stored in the world's forests
- ▶ SAR instruments:
  - ▶ **P-band** (~70 cm) – first in space!
- ▶ Planned launch: **2024**

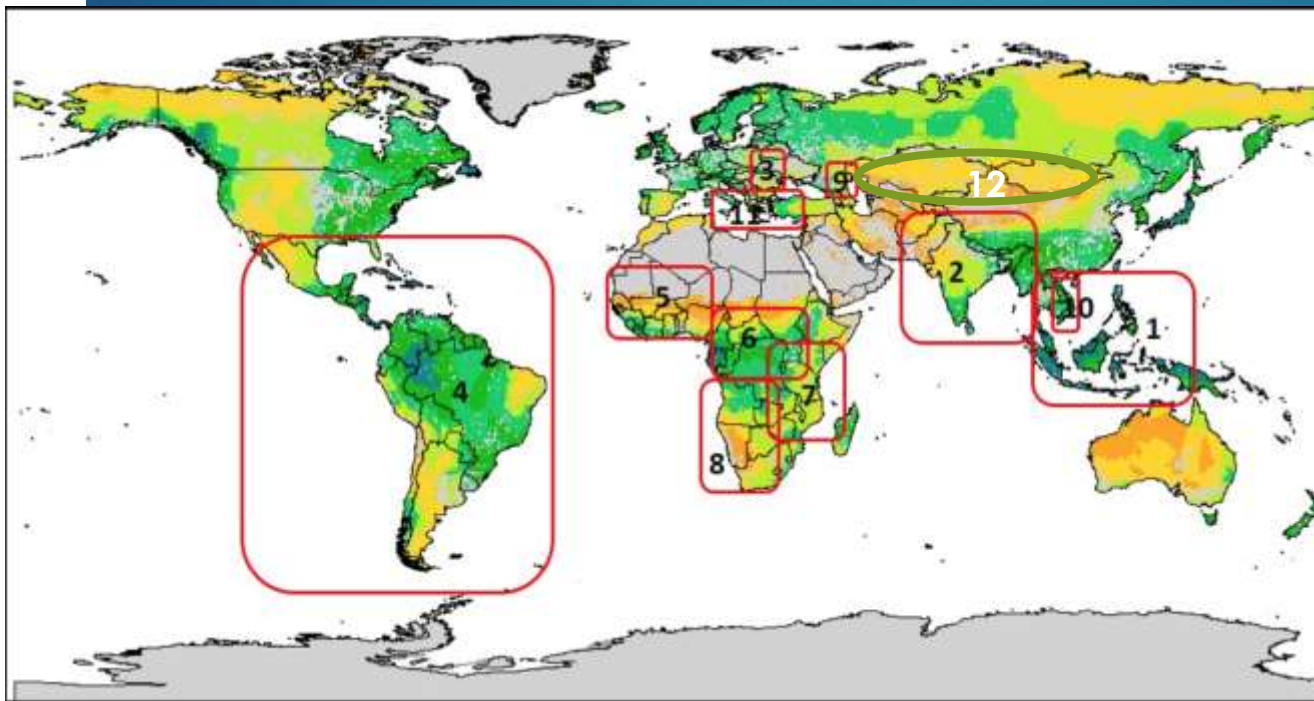

The SAR antenna is based on a large deployable reflector (12 m circular projected aperture)

# Brno

- ▶ 780 years ago (in 1243): Brno was recognized as a town by Wenceslaus I, King of Bohemia
- ▶ One of the industrial centers of Moravia and the Austro-Hungarian Empire – sometimes referred to as the "Moravian Manchester"
- ▶ The city of Gregor Mendel

# Christian Doppler

Austria-born, Doppler got a professorship of math and geometry at the **Prague Polytechnic Institute** (now **Czech Technical University in Prague**).

In 1842, gave a lecture to the **Royal Bohemian Society of Sciences** with a postulated principle: Doppler effect (*the observed frequency of a wave depends on the relative speed of the source and the observer*). In 1847 he **left Prague** for the professorship of mathematics, physics, and mechanics at the **Academy of Mines and Forests in Hungary (now Slovakia)**, from where he **left for Vienna** in 1849.

While at U. Vienna, Doppler influenced the development of **Gregor Mendel** - a student at the U, Vienna from 1851 to 1853.

*“The most rewarding research projects are those that delight the thinker and are of benefit to humankind”* – Doppler’s motto
