

NASA's Application for Extracting and Exploring Analysis Ready Samples (AppEEARS) as a geospatial data access and processing tool

Dr. Monika Anna Tomaszewska

Center for Global Change & Earth Observations

Michigan State University

Welcome to AppEARS!

Application for **Extracting** and **Exploring** Analysis Ready Samples (AppEARS)

The Application for Extracting and Exploring Analysis Ready Samples (AppEARS) offers a simple and efficient way to access and transform geospatial data from a variety of federal data archives. AppEARS enables users to subset **geospatial datasets** using spatial, temporal, and band/layer parameters. Two types of sample requests are available: **point samples** for geographic coordinates and **area samples** for spatial areas via vector polygons. Sample requests submitted to AppEARS provide users not only with data values, but also associated quality data values. Interactive visualizations with summary statistics are provided for each sample within the application, which allow users to preview and interact with their samples before downloading their data. Get started with a sample request using the Extract option above, or visit the [Help page](#) to learn more.

- Land Processes Distributed Active Archive Center (LP DAAC) is one of several discipline-specific data centers within the NASA Earth Observing System Data and Information System (EOSDIS).
- The LP DAAC is located at the USGS Earth Resources Observation and Science (EROS) Center in Sioux Falls, South Dakota.
- The LP DAAC processes, archives, and distributes land data products to users in the earth science community free of charge through NASA Earthdata Search and download clients.
- The LP DAAC supports tools and services, like the AppEARS, which allows users to transform and visualize data before download while offering enhanced subsetting and reprojecting capabilities.

Available Products

Select a dataset below to list the products that are currently available in AppEEARS .

- Aqua MODIS
- Aqua MODIS
- ASTER GDEM
- Combined MODIS
- DAYMET
- ECOSTRESS
- EMIT
- Global WELD
- GPW
- Harmonized Landsat and Sentinel-2
- Landsat ARD
- MEaSURES LSTE
- NASADEM
- NOAA-20 VIIRS
- NPS Historical Water Balance, Daily
- NPS Historical Water Balance, Monthly
- SMAP
- SRTM
- Suomi NPP VIIRS
- Terra MODIS

| Source | Layer | Availability |
|--------|--|---------------|
| LP | sur_refl_b01 Surface Reflectance Band 1 | Available |
| DAAC | sur_refl_b02 Surface Reflectance Band 2 | Available |
| | sur_refl_b03 Surface Reflectance Band 3 | Available |
| | sur_refl_b04 Surface Reflectance Band 4 | Available |
| | sur_refl_b05 Surface Reflectance Band 5 | Available |
| | sur_refl_b06 Surface Reflectance Band 6 | Available |
| | sur_refl_b07 Surface Reflectance Band 7 | Available |
| | sur_refl_day_of_year Day of the year for the pixel | Available |
| | sur_refl_qc_500m Surface reflectance 500m band quality control flags | Available |
| | sur_refl_raz MODIS relative azimuth angle | Available |
| | sur_refl_state_500m Surface reflectance 500m state flags | Available |
| | sur_refl_szen MODIS solar zenith angle | Available |
| | sur_refl_vzen MODIS view zenith angle | Available |
| LP | gflags_1 Geolocation flags | Available |
| DAAC | granule_pnt_1 Granule Pointer | Available |
| | iobs_res_1 Observation number | Available |
| | num_observations_1km Number of observations per 1K pixel | Available |
| | num_observations_500m Number of observations per 500m pixel | Not Available |
| | obscov_500m_1 Observation coverage | Available |
| | orbit_pnt_1 Orbit pointer | Available |
| | q_scan_1 250m scan value information | Not Available |
| | QC_500m_1 Surface Reflectance 500m Quality Assurance | Available |
| | Range_1 Distance to sensor | Available |
| | SensorAzimuth_1 Azimuth angle to sensor | Available |
| | SensorZenith_1 Zenith angle to sensor | Available |
| | SolarAzimuth_1 Solar azimuth | Available |
| | SolarZenith_1 Zenith angle to sun | Available |
| | state_1km_1 1km Reflectance Data State QA | Available |
| | sur_refl_b01_1 Surface Reflectance Band 1 | Available |
| | sur_refl_b02_1 Surface Reflectance Band 2 | Available |
| | sur_refl_b03_1 Surface Reflectance Band 3 | Available |
| | sur_refl_b04_1 Surface Reflectance Band 4 | Available |
| | sur_refl_b05_1 Surface Reflectance Band 5 | Available |
| | sur_refl_b06_1 Surface Reflectance Band 6 | Available |
| | sur_refl_b07_1 Surface Reflectance Band 7 | Available |

Extract Point Sample

Enter a name to identify your sample

Gap_Fire_DEMO

Upload coordinates from a file

Drop a CSV file containing the coordinates or [click here](#) to select the file. Coordinates can also be entered manually in the uploaded coordinates box.

The CSV file can contain up to 4 columns separated by commas with each coordinate on a separate line.

1. ID (optional) - uniquely identifies the coordinate
2. Category (optional) - label to group common coordinates
3. Latitude - latitude in decimal degrees (-90 to 90)
4. Longitude - longitude in decimal degrees (-180 to 180)

Start Date

01-01-2006

End Date

11-25-2016

Is Date Recurring?

Uploaded coordinates (ID, Category, Lat, Long): 6

```
0, Non-fire, 34.4544983, -119.8659973
1, Non-fire, 34.4714012, -119.9179993
2, Non-fire, 34.4856987, -119.9169998
17, Fire, 34.4805984, -119.9000015
18, Fire, 34.4976006, -119.9229965
19, Fire, 34.4842987, -119.8669968
```

Selected coordinates

Add coordinates using the tool. View coordinate details by clicking the markers on the map.

Select the layers to include in the sample

Terra MODIS Vegetation Indices
MOD13Q1.006, 250m, 16 day, (February 2000 - Present)

- _250m_16_days_MIR_reflectance
- _250m_16_days_NIR_reflectance
- _250m_16_days_VI_Quality
- _250m_16_days_blue_reflectance

Selected layers

- _250m_16_days_EVI 250m, 16 day
- _250m_16_days_NDVI 250m, 16 day

Extract Area Sample

Enter a name to identify your sample

Gap_Fire_Area_Analysis

Upload a file or draw a polygon using the or icon

Drop a vector polygon file containing the area feature(s) to extract or [click here](#) to select the file.

Supported file formats:

- ESRI Shapefile (.zip including .shp, .dbf, .prj and .shx files)
- GeoJSON (.json or .geojson)

Start Date

01-01-2006

End Date

12-31-2010

Is Date Recurring?

Select the layers to include in the sample

Search for a product

Selected file (Gap_Fire_AGU_Demo)

To clear a polygon, draw a new polygon or upload a vector polygon file.

Selected layers

- Lai_500m 500m, 8 day
- NDVI_TOA 30m, Monthly
- FireMask 1000m, 8 day
- Maximum_Snow_Extent 500m, 8 day
- population-density 1000m, Quinquennial
- Band1 30m, Static

- @NASA Earthdata YouTube channel: Efficient Geospatial Data Access with NASA's AppEEARS <https://www.youtube.com/watch?v=onK2DFIltJA> & <https://www.earthdata.nasa.gov/learn/webinars-and-tutorials>

For users looking for programmatic (API) access

- AppEEARS API : <https://appears.earthdatacloud.nasa.gov/api/>
- Github repository for users looking for programmatic (API) access: <https://github.com/nasa/AppEEARS-Data-Resources>
- Repository contains a couple of word documents that provide step-by-step instructions for walking through point and area extraction examples (they are from a workshop given in 2020 so the products listed may have newer versions): <https://git.earthdata.nasa.gov/projects/LPDUR/repos/naccb/browse>
- LP DAAC e-learning website: <https://lpdaac.usgs.gov/resources/e-learning/>

Feedback to monikat@msu.edu:

What products and/or features would you like to see added to AppEEARS?

THANKS!
